

## **REMARKS**

Applicants have provided a substitute specification to correct the sequence identifiers in the application as well as two typographical errors, and have directed that the paper copy of the sequence listing, which is submitted herewith, be entered into the captioned application. As required by 37 C.F.R. § 1.125(b), Applicants also state that the Substitute Specification contains no new matter.

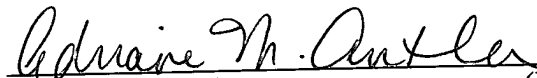

The Substitute Specification is identical to the originally filed application, with the following exceptions: 1) Where necessary, "SEQ ID" sequence identifiers have been added or amended to correspond to the "SEQ ID" sequence identifiers used in the paper form and computer readable form of the Sequence Listing submitted concurrently herewith; 2) At page 3, line 5, errors in the three-letter code sequence for SEQ ID NO:1 have been amended to match the correct one letter code sequence (*i.e.*, the Ns in the correct sequence NANP represent asparagine (Asn) and not aspartate (Asp)); and 3) At page 23, line 17, the typographical error "Age" in SEQ ID NO:171 has been amended to the correct three-letter code for arginine, Arg. These amendments correct obvious typographical errors and, as such, do not introduce any new matter.

## **CONCLUSION**

Applicants respectfully request that the Substitute Specification, paper form of the Sequence Listing and computer readable form of the Sequence Listing be entered and made of record in the instant application. An early allowance is earnestly requested.

Respectfully submitted,

Date: January 21, 2005
